

NO GAS TERMINAL IN CORIO BAY!

RENEWABLES

NOT GAS

FOR GEELONG

www.geelongrenewablesnotgas.org

We acknowledge the Wadawurrung people, the traditional custodians of the land on which we work and live, and recognise their continuing connection to land, water and community.

Viva is proposing to build a floating gas import terminal in Corio Bay that takes our community in the wrong direction

Gas is highly flammable and many locals are concerned about safety. Best practice is to locate gas terminals and LNG tankers at least 3.5kms away from residents, as happens elsewhere in Australia. Geelong residents will live within 2km of Viva's proposed terminal and less than 250m away from the transiting LNG tankers. The risks to life include asphyxiation, incineration or burns.

Gas is a polluting fuel that contributes to the climate crisis. LNG is Methane, which can be even worse for the climate than coal because it leaks into the atmosphere. This leaked gas traps more warmth, increasing our risks of severe heat, drought, bushfires and sea-level rise.

Geelong should be a hub for renewables, not gas. We've got the infrastructure, skilled workforce and proud manufacturing heritage to position our region as the place for the rapidly growing clean energy industry.

These floating gas terminals are a threat to marine life and fishing. The Victorian government has already rejected a gas terminal in Westernport Bay because of "unacceptable risks" to the marine environment. Fishers will likely face extensive exclusion zones along the shipping channel and gas terminal to ensure the security of the LNG tankers and the floating gas terminal.

We can use renewable electricity instead of gas. Household gas appliances can be replaced with electric appliances that are cheaper, cleaner and safer to run.
